# Remarks on this notice

This document is intended for use by facilities that recycle or process end-of-life materials. It provides fundamental instructions for disassembling Webdyn products in accordance with the European Directive 2012/19/EU on Waste Electrical and Electronic Equipment (WEEE), to remove parts and materials that require special treatment. This guide gives essential details to ensure that the materials and components of the product receive appropriate care at the end of their life.

## **SAFETY ADVICE**

All components must be removed in accordance with all applicable electrical and safety regulations. Disassembly should only be performed by qualified personnel. Webdyn advises dismantlers to wear protective goggles as parts may become detached during disassembly, especially in the case of broken or welded parts. If applicable, disconnect all power supplies from the components before gently opening the casing. Once the casing is opened, please recycle both parts of the casing and all other parts in accordance with the regulations in your region.

## **Remarks**

Lifespan of Webdyn products: between 5 to 10 years (depending on usage and the number of frames sent per day).

## **Product Disassembly Process**

- Disconnect the electrical connection of the product.
- Carefully open the casing on the sides using the two clips present.
- Carefully remove the electronic board by unscrewing it from the back casing (2 screws).
- Once the front casing, back casing, and the board are separated, please recycle the casings and all other components in accordance with local legal requirements.

The products comply with European directives according to the EU declaration of conformity available from Webdyn.

### Recycling:

The transposed European directives on waste batteries and electrical and electronic equipment (WEEE) outline the necessary actions to limit the negative impact of the product's end of life.

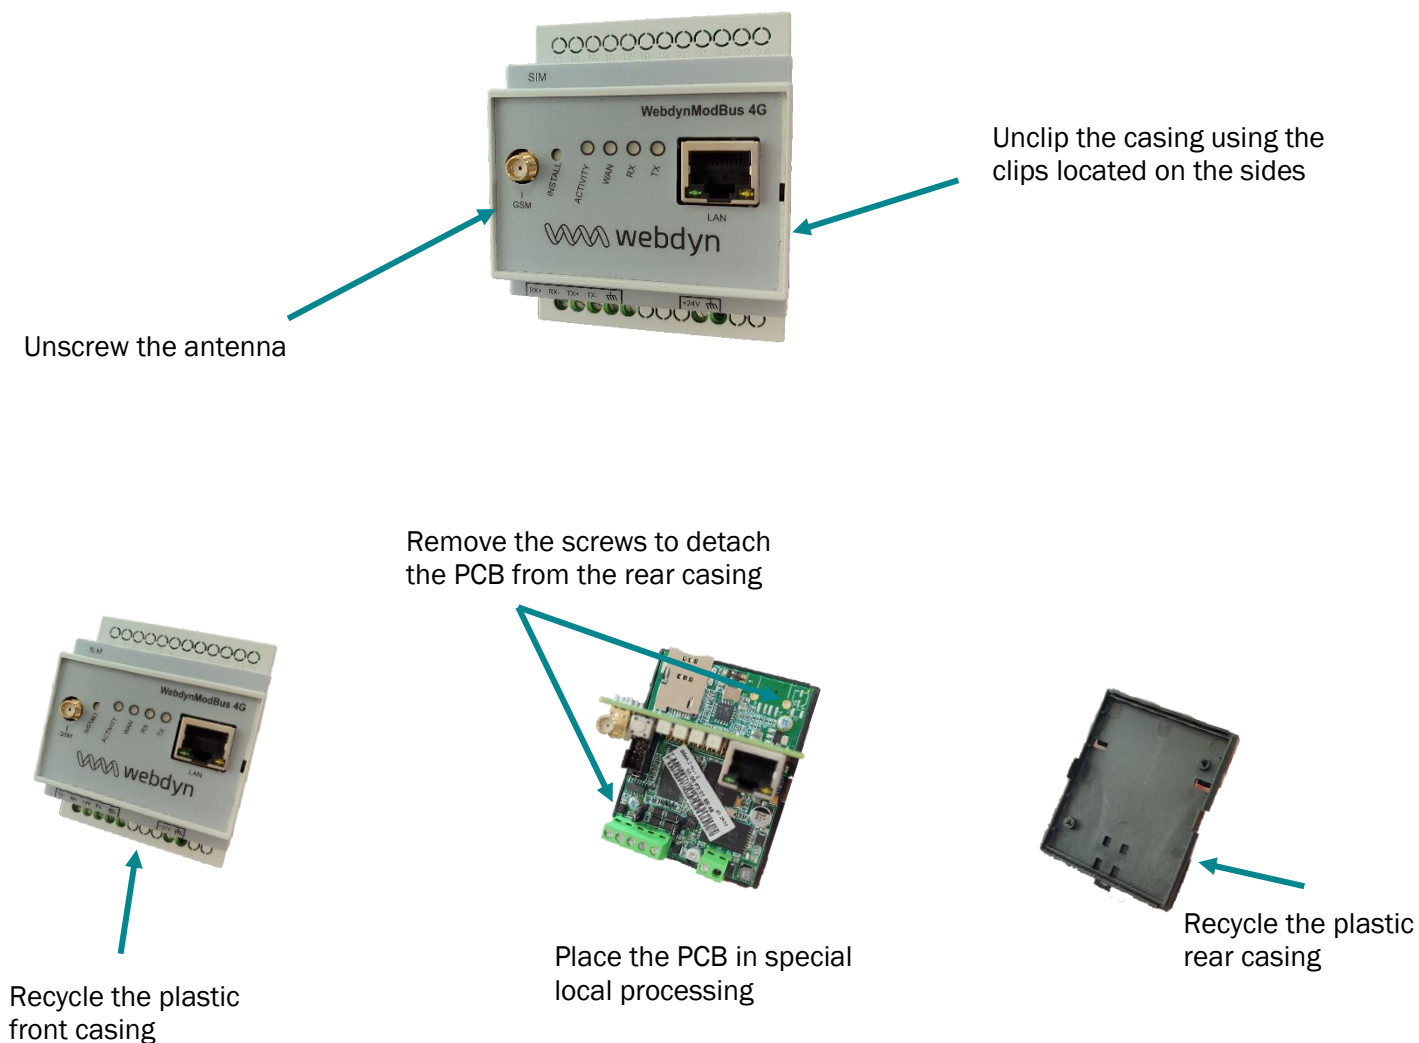

This symbol is present on the front and back casing, allowing recycling in the standard recycling bin.

These products are subject to separate collection. Use an authorized battery collection and treatment center or contact Webdyn.

## Example on the WebdynModbus

The following lists, identifies, and places the parts of the WebdynModbus product that enhance recycling performance (the same applies to the WebdynPulse and WebdynTIC references):

# Summary

| Part details              | Where to recycle                                    |
|---------------------------|---|
| Gray plastic front casing | Recycling bin (usually yellow)                      |
| Black plastic rear casing | Recycling bin (usually yellow)                      |
| GSM antenna               | Waste collection center or special local processing |
| Screws                    | Waste collection center or special local processing |
| PCB                       | Waste collection center or special local processing |
